

Bard Access Systems Hickman® Catheters

The most requested name, the most complete line.

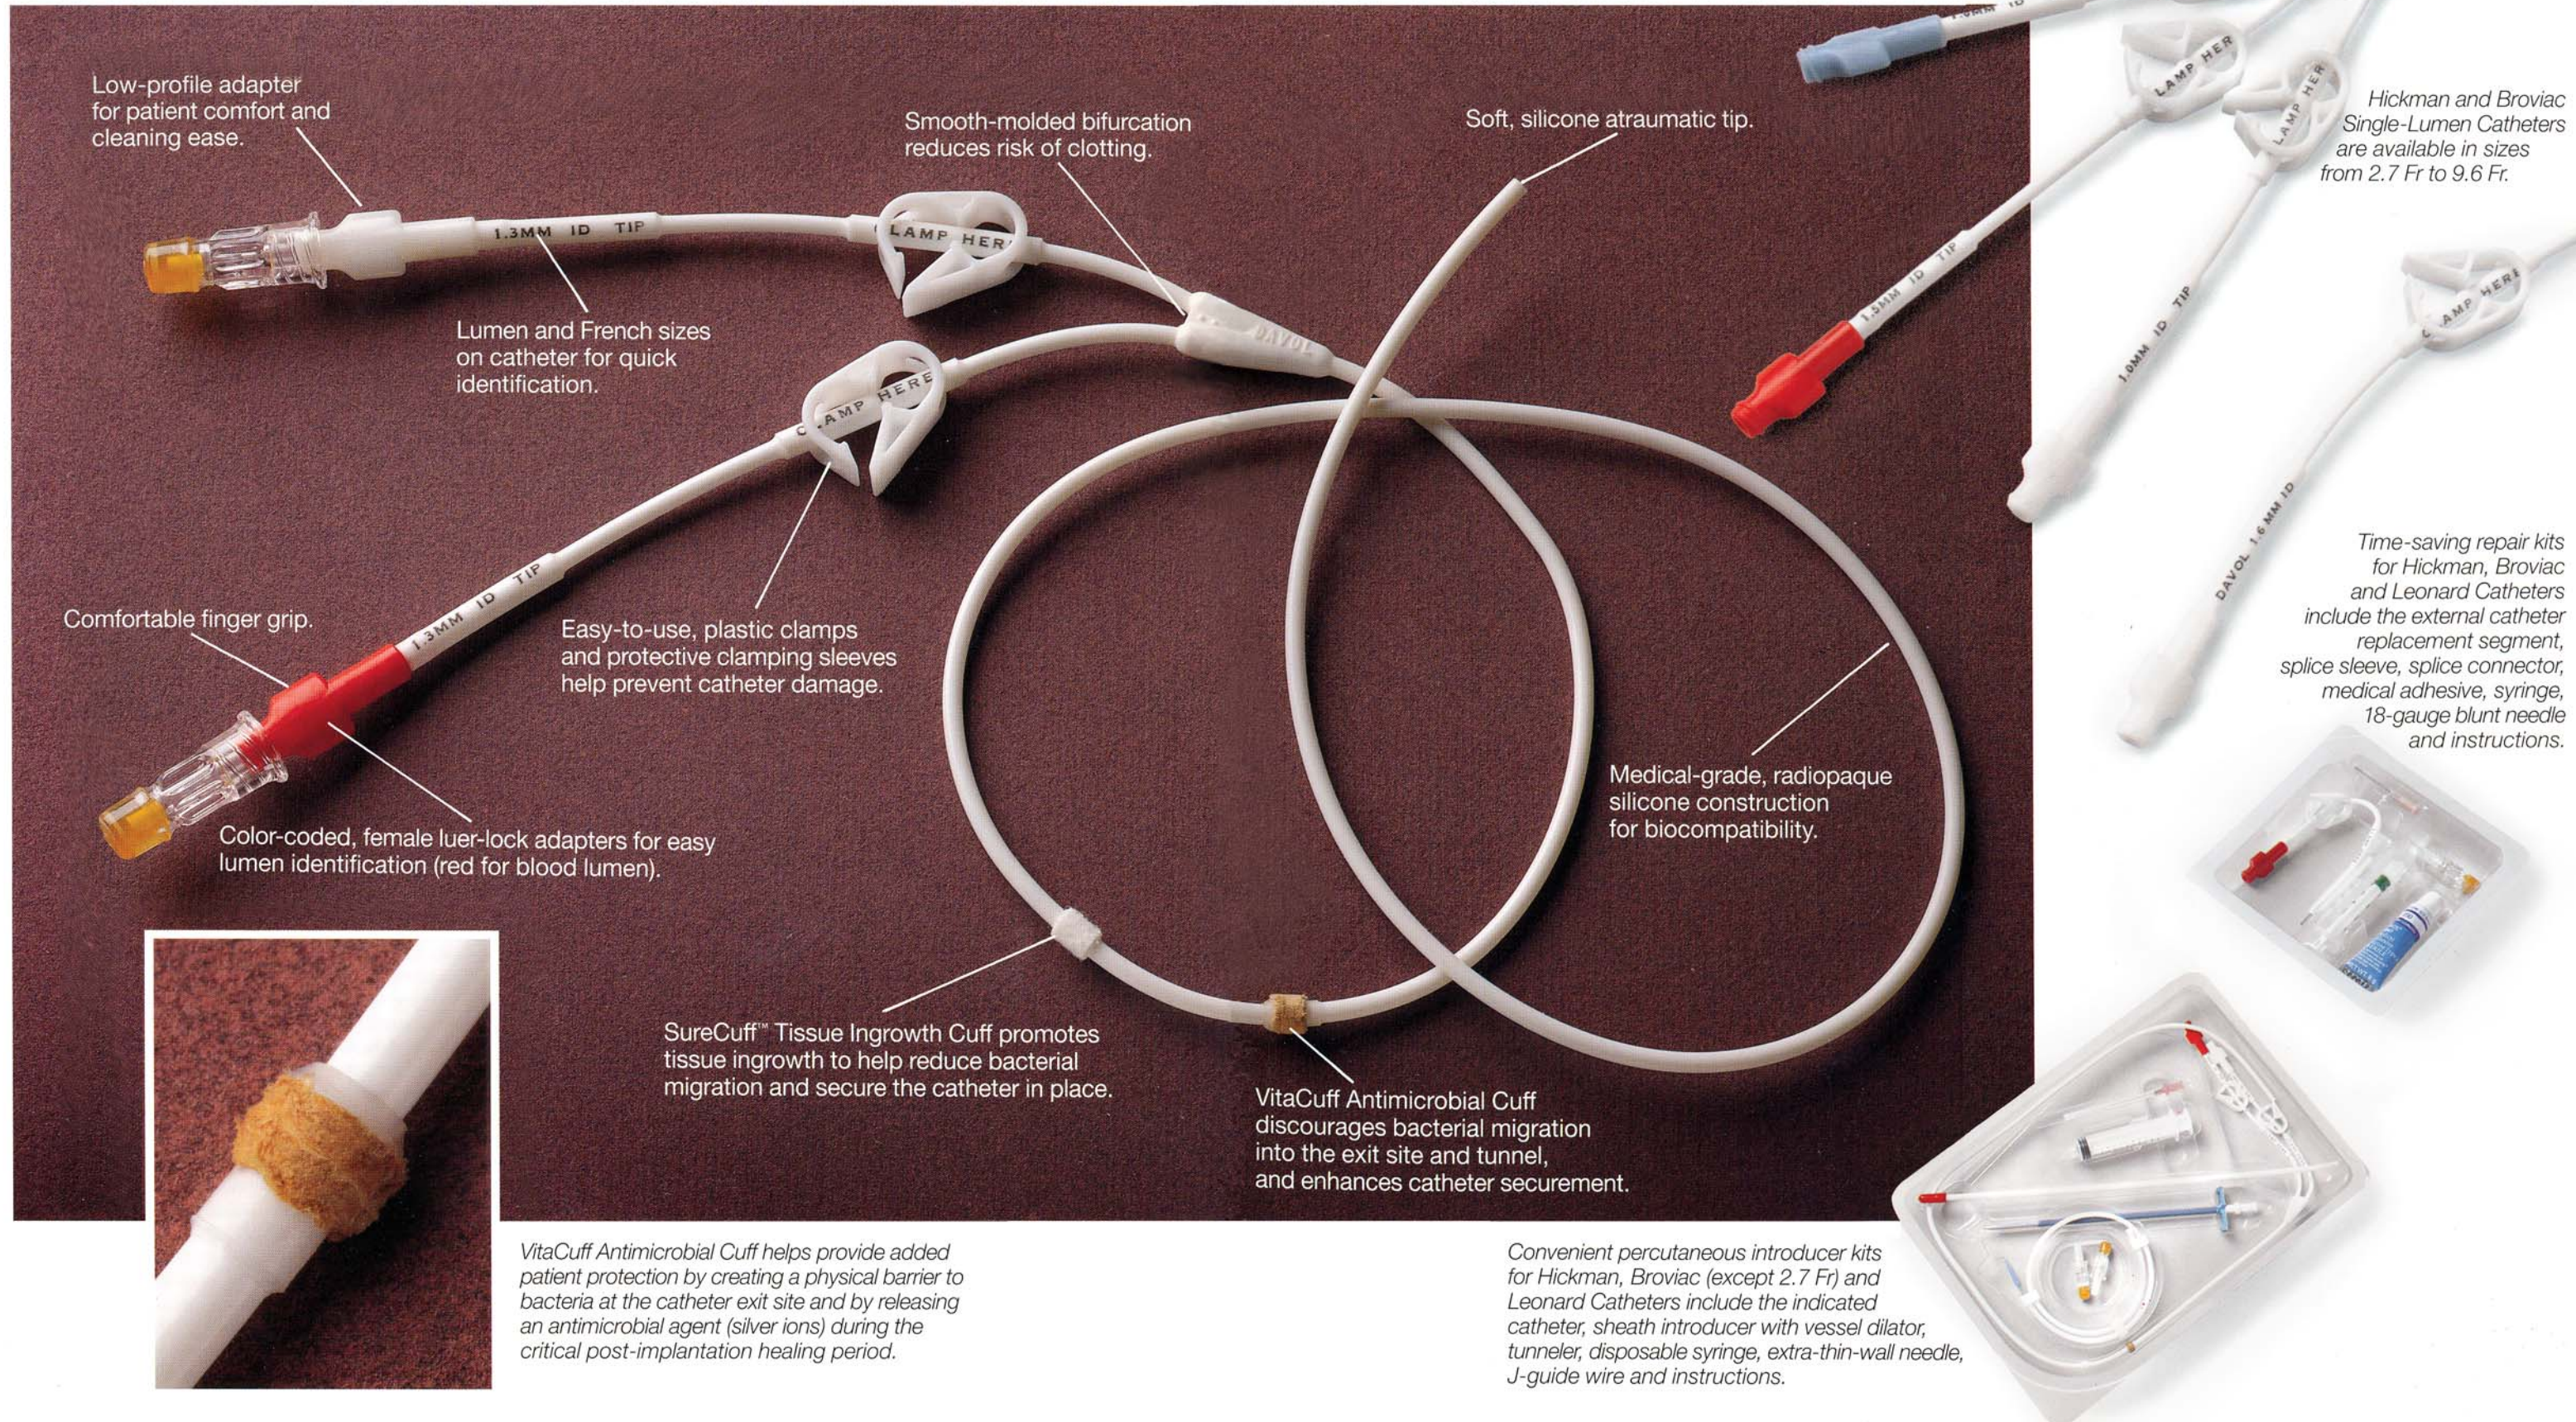

BARD

Original Hickman® excellence for all your long-term vascular access needs.

Bard understands that your patients have a variety of vascular access needs. To help you meet these needs, we offer the most complete line of vascular access devices for adult and pediatric care. Our Hickman, Broviac® and

Leonard® Catheters are available with percutaneous introducer kits to facilitate placement. And all these catheters feature the VitaCuff® Antimicrobial Cuff, which helps provide increased protection against infection.

Hickman Triple-Lumen Catheters provide versatile long-term vascular access capabilities.

Low-profile adapter for patient comfort and cleaning ease.

Smooth-molded bifurcation reduces risk of clotting.

Soft, silicone atraumatic tip.

Lumen and French sizes on catheter for quick identification.

Comfortable finger grip.

Easy-to-use, plastic clamps and protective clamping sleeves help prevent catheter damage.

Color-coded, female luer-lock adapters for easy lumen identification (red for blood lumen).

Medical-grade, radiopaque silicone construction for biocompatibility.

SureCuff™ Tissue Ingrowth Cuff promotes tissue ingrowth to help reduce bacterial migration and secure the catheter in place.

VitaCuff Antimicrobial Cuff discourages bacterial migration into the exit site and tunnel, and enhances catheter securement.

Hickman and Broviac Single-Lumen Catheters are available in sizes from 2.7 Fr to 9.6 Fr.

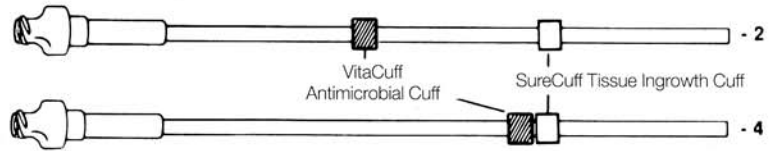

Time-saving repair kits for Hickman, Broviac and Leonard Catheters include the external catheter replacement segment, splice sleeve, splice connector, medical adhesive, syringe, 18-gauge blunt needle and instructions.

VitaCuff Antimicrobial Cuff helps provide added patient protection by creating a physical barrier to bacteria at the catheter exit site and by releasing an antimicrobial agent (silver ions) during the critical post-implantation healing period.

Convenient percutaneous introducer kits for Hickman, Broviac (except 2.7 Fr) and Leonard Catheters include the indicated catheter, sheath introducer with vessel dilator, tunneler, disposable syringe, extra-thin-wall needle, J-guide wire and instructions.

Hickman®, Broviac® and Leonard® Catheters with VitaCuff® Antimicrobial Cuff

Catheter code numbers ending in "4" have VitaCuff Antimicrobial Cuff positioned immediately adjacent to the SureCuff™ Tissue Ingrowth Cuff; catheter code numbers ending in "2" have VitaCuff positioned approximately 4 cm from SureCuff. Catheter code numbers ending in "0" have SureCuff only.
