Integrity

BORCAD[®]

We always offer something more

Integrity

INTEGRITY

Thanks to its integrity, the chair in all respects complies with essential doctors' requirements for examination ergonomics. A minimal access position enables access even for older and less movable patients. An examination position is fully adjustable according to the doctor's needs. A new integrated position for lying is adapted to an

abdominal examination. Quick adjustment of the chair saves the doctor's time and increases the patient's comfort. By the logical coupling of an examination chair and an examination couch we have superseded two health-care devices (chair and couch) in one – the Gracie chair.

Integrity

Examination position

The setting range of examination positions ensures that a doctor can work comfortably.

Access position

Very low access height comfortable even for less movable patients.

New concept of foot rests

Convenient for common ultra-sound examination.

COMFORT
FOR LIFE

From a chair to a couch

Position for an ultra-sound examination

An integrated position for an ultra-sound examination increases the patient's comfort, examination ergonomics and saves space in the doctor's surgery.

Dynamics

Constantly in motion

DYNAMICS

The dynamic properties of the chair make a doctor's work more effective and the examination process more comfortable. All drives of the chair have been accelerated to achieve the shortest possible time for changing from one position to another. Currently, Gracie is one of the fastest chairs in the market. The quickness of the chair reduces the doctor's unproductive time (downtime) and improves the effectiveness of an examination. Adjusting the chair to pre-

programmed positions is ensured by wire-less technology. Using wire-less technology improves operating comfort and safety of the staff and patients.

The GRACIE chair is equipped with a draw-out castor intended for movement in a doctor's surgery. This original arrangement of BORCAD means the chair can be handled and set very easily by just one person.

Dynamics

The fastest adjustment of all positions on the market.

Fixed foot controller situated on the chair frame

Adjustment of an examination position according to the individual figure of the patient.

Foot rests

Connected with comfortable horizontal adjustment with one hand.

Remote control

- control of all electrical functions of the chair,
- saving individual positions,
- memory functions may be set by up to 3 doctors at the same time.

COMFORT FOR LIFE

Effective use of time and space

Revolution system of foot controller

Mobile wire-less foot controller for comfortable adjustment of

- an access position,
 - an examination position,
 - an ultra-sound position,
- from any place within the doctor's surgery.

Details are important

Design

DESIGN

The design is not subject to extravagant trends and has been sensitively selected to be elegant and fresh even after several years. The modern and appealing design of the Gracie chair increases the prestige of a doctor's surgery.

The compact design of the chair is composed with respect to saving space within a doctor's surgery.

An accent on high safety for both the patient and doctor is an integral part of the design conception. The lines of the chair have been purposely selected to maximally eliminate possible injury of a doctor or an examined patient. The ergonomic shapes of the upholstery also positively impact comfortable positioning of a patient and calm her while being examined.

Design

Designed by
Jiří Španihel

The shape of the chair offers ergonomic space for the doctor while working and enables quick and safe cleaning by the staff.

COMFORT
FOR LIFE

Aesthetics, comfort and ergonomics

The aesthetic design and colour options reduce a patient's stress before and during the examination.

The modern and appealing design of the Gracie chair increases the prestige of a doctor's surgery

The optimally designed areas of Gracie grant a patient maximum comfort.
